# Healthcare in China and in US - opportunites

### Ming Wang, MD, PhD

Founding president, Tennessee Chinese Chamber of Commerce Founder and chairman, Wang Foundation for Sight Restoration International president, Shanghai Aier Eye Hospital, China Clinical associate professor of ophthalmology of University of Tennessee Director, Wang Vision Cataract & LASIK Center, Nashville, TN, 37203,

- The central and powerful (and still dictating) role of the government in China. <u>\$123 billion</u> for the first stage healthcare reformation; 90% coverage;
- China announced last year that it now encourages foreign investment in healthcare, <u>allowing foreign</u> <u>majority ownership (70%);</u>
- US's capital/management expertise is what China needs;
- China needs to improve its healthcare, to keep its populous happy and society <u>STABLE</u>, anger over the rising polarization of the rich and poor, and massive urbanization (30% in 1995, will be 55% in 2020) may destabilize the society which is growing rapidly (economically) but stagnant and confused (morally);
- This dynamic has fostered an openness by the government to <u>public-private co-existing</u> models in many industries including healthcare.

- Understand the status of China's healthcare and governmental policies;
- Opportunities by partnering with Chinese, infusing management expertise into China;
- Opportunities to participate in US healthcare reform with <u>capitals from</u> <u>China.</u>

- Understand the status of China's healthcare and governmental policies;
- Opportunities by partnering with Chinese, infusing management expertise into China;
- Opportunities to participate in US healthcare reform with capitals from China.

## Healthcare in China

Among 18,703 hospitals, there are 2027 private hospitals (10/8%)

# China hospital types

Based on specialty: comprehensive, specialty (e.g., children's, dentistry, OB, psychiatry, etc), rehab, traditional Chinese medicine, East-West, occupational; Based on specialized task designation: Military, civilian, factory, affiliated with medical school.

# Advantage and disadvantage of public and private hospitals

### Public:

A: Facility complete, experienced doctors, ability to deal with complications;
D: Crowded, long wait, poor service;

Private:

A: Good service, safe, doctors work beyond 5pm; D: Charges are higher, less public confidence;

## Problems with private hospitals

- Small scale, lack of collaboration between hospitals;
- Lack of high tech facility and personnel;
  Too specialized, commercialized medicine;
  Myopic in business planning;
  Faced with tough competition from public hospitals in the same locale;

# Three major mistakes made by China's private hospitals

Heavy investment;
Market position not clear;
Management not systemized.

Problems with <u>public hospitals</u> in the wake of rising private hospitals: draining of manpower from public to private

- Higher salaries at private hospitals (RMB 200K-400K);
- Kickbacks more prevalent in private hospitals;
- Bureaucracy at public hospitals;

# Chinese government and private enterprise

### Love-and-hate relationship

## Insurance coverage in China

 1 in 4 has insurance among city-dwellers (400 millions);

I in 10 have insurance in the country side (900 millions);

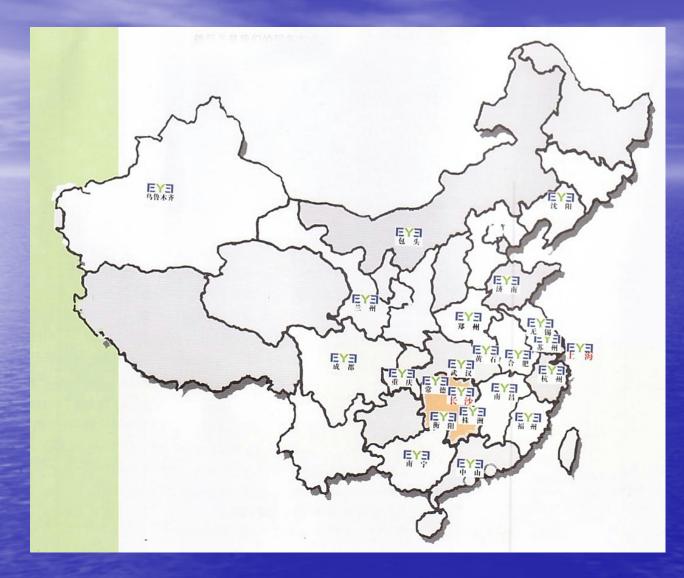

- Understand the status of China's healthcare and governmental policies;
- Opportunities by partnering with Chinese, infusing management expertise into China;
- Opportunities to participate in US healthcare reform with capitals from China.

### China eyecare

- Cataract and degenerative myopia are the most important causes of visual disability;
- Cataract accounts for 36.7% of cases of visual impairment;
- Degenerative myopia: 32.7%;
- Glaucoma: 14.3%;
- Corneal opacities: 6.1%;
- Lower incidence of retinal disease than in the West (1.4% for early AMD, and 0.1% for late AMD);
- Strong association between myopia and glaucoma;
- 3,000 pts cataract surgeries per million in US, but China only has 300 (10% of US' level of eyecare in cataract). In China, 700,000 cataract surgery each year, with 5,000,000 cases waiting, even if not a single new cataract is formed tomorrow, it will take 7 years for China to take care of its current cataracts; even for 20/200 or worse severe cataract, it will take 3 years;

Aier Eye Hospital – the largest private eye hospital group in China (the "HCA of China")

- Currently the largest private eye hospital system in China;
- 20 free-standing full service private eye hospitals (80,000 LASIKs, 10% of the entire China's volume, which has <u>surpassed US</u> for the first time in history in 2009);
- Went IPO in October 2009.
